Gentlemen,

Thank you for allowing us to demo some of our equipment.
Below is pricing and some pictures that were taken.

Water was used in conjunction with the Turbolava to break the soil load on the tile and in the grout. Something a mop and bucket cannot do.

The Turbolava two counter-rotating brushes scrub the floor and allows the same equipment to extract the soil into a recovery tank

We tested your floors for (Wet SCOF)- wet slip coefficient and left you the documented results for your files. In the kitchen we used the Turbolava and Traction Plus a NFSI certified product. This combination raised the slip coefficient by 70% well above OSHA'S .50 standard. A (UWT) Universal Walkway Tester cost \$4500.00. We use it to document the result of both before and after cleaning with the Turbolava. This a free service when you purchase our systems. The benefits of using our system are two fold, you have a **Clean, Safe** and **Dry floor** that is documented. A track record can be created for future reference and litigation.
